Core Concepts and Sample Answers for the ISSA Final Exam

Below are some common questions and detailed answers to help guide your preparation.

1. What are the primary functions of the skeletal system?

The skeletal system provides structural support, protection for internal organs, facilitates movement through attachment points for muscles, stores minerals such as calcium and phosphorus, and produces blood cells within the bone marrow.

2. Explain the difference between isotonic, isometric, and isokinetic exercises.

- **Isotonic exercises:** Involve movement of the joint through a range of motion with a constant tension, such as lifting weights or performing a bicep curl.
- **Isometric exercises:** Involve muscle contraction without movement, maintaining a static position, like planks or wall sits.
- **Isokinetic exercises:** Involve muscle contractions at a constant speed with accommodating resistance, often using specialized equipment.

3. How do you calculate the one-repetition maximum (1RM)?

The 1RM can be estimated using submaximal testing and formulas such as the Epley formula:

$$- 1RM = \text{weight lifted} \times (1 + (\text{repetitions performed} / 30))$$

This calculation provides an approximate maximum weight a client can lift for one repetition, aiding in program design.

4. Describe the principles of program periodization.

Periodization involves dividing training into specific cycles to optimize performance and prevent plateaus. The main principles include:

- Progressive overload: Gradually increasing the stress on the body.
- Variation: Changing training variables to prevent adaptation.
- Specificity: Tailoring training to achieve specific goals.
